TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL
Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, Maven
Frontend: Angular, HTML, CSS, Angular Material
Data: Relational database design, MySQL, PostgreSQL, H2
Tools: Git, GitHub, GitLab, IntelliJ IDEA, VS Code
Certifications: AWS Cloud Practitioner, Security+, Network+, A+

EDUCATION

Bachelor's Degree: Software Engineering
Western Governors University - Salt Lake City, UT — In Progress

Technical Certificate: Information Technology and Infrastructure Management
Tennessee College of Applied Technology – Murfreesboro, TN — Dec. 2021

PROJECTS

Java / Spring Boot, Inventory Management System

- Built a Java/Spring Boot application using MVC architecture, layered service logic, and repository-based persistence
- Modeled relational domain entities with Spring Data JPA/Hibernate, including entity relationships, validation, and cascading persistence
- Implemented inventory workflows involving parent/child entity relationships, assembly logic, and validation rules
- Managed source control with Git, including branching, conflict resolution, and commit history cleanup
- Refactored application code to improve domain modeling, controller/service separation, and long-term maintainability

Full-Stack Java / Angular, E-Commerce Application

- Implemented Java/Spring Boot backend features for an existing Angular e-commerce frontend
- Built checkout and order-processing logic according to fixed interface and business requirements
- Modeled normalized customer, product, cart, and order data using relational database design principles
- Applied validation rules and repository-backed persistence to support reliable transaction flow

IT ADMINISTRATION EXPERIENCE

Helpdesk, Network/Systems Administration, Various Positions — 2020 – 2024

- Administered Cisco-based campus area network for pharmaceutical manufacturing equipment, scientific instrumentation, and other endpoints
- Installed and validated sensitive laboratory instrumentation while coordinating with multiple departments, vendor support, and internal stakeholders
- Configured custom Windows images to standardize and automate workstation deployment
- Installed and configured network devices to connect multiple remote locations
- Remotely diagnosed issues relating to network connectivity, share access, remote desktops, and hardware failure
- Resolved 5-10 level 1 issues and gathered context for issues that required escalation
- Performed datacenter tasks including toning ports, terminating network cable, and drive swaps
- Automated support and administration tasks using PowerShell, Power Automate, Microsoft Forms, Active Directory, and Office 365 tools
