TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, SQL
Backend: Spring Boot, Spring MVC, Spring Data JPA, Hibernate
Frontend: React, Next.js, Angular, HTML, CSS
Data: PostgreSQL, MySQL, H2, relational modeling
Tools: GitHub, GitLab, Docker, Maven

EDUCATION

Bachelor's Degree: Software Engineering — Expected Nov. 2026
Western Governors University - Salt Lake City, UT

Technical Certificate: Information Technology & Infrastructure Management — Dec. 2021
Tennessee College of Applied Technology - Murfreesboro, TN

SOFTWARE ENGINEERING EXPERIENCE

Software QA Intern, AuxioAI — Jun. - Aug. 2026

- Reproduced and documented application defects, verified completed fixes through manual regression testing.
- Corrected dashboard logic that retrieved and displayed user information.
- Fixed mobile UI spacing and scroll-position issues and non-functional navigation icons.
- Submitted changes through GitHub and communicated findings and test results with the development team through Slack.

PROJECTS

Inventory Management System, Java / Spring Boot

- Built a Spring Boot application with MVC implementation - service, and repository layers backed by Spring Data JPA/Hibernate persistence.
- Modeled domain entity relationships and developed validation, cascading persistence, assembly logic, and inventory workflows.
- Refactored controller and service responsibilities to improve domain modeling, maintainability, and separation of concerns.

NetScan Application, Java / Spring Boot / PostgreSQL / Docker

- Built a Java/Spring Boot network-scanning service that validates CIDR subnets, checks hosts for network reachability, and stores scan results in PostgreSQL Docker container.
- Used a fixed-size ExecutorService thread pool to scan multiple addresses concurrently while limiting resource usage.
- Modeled target subnets, scans, and scan results with JPA/Hibernate and tracked each scan through staged, in-progress, and completed states.
- Diagnosed and resolved persistence issues involving transaction boundaries and lazy-loaded entity relationships.

PRIOR IT EXPERIENCE

IT Support & Network/Systems Administration — 2020 - 2024

- Administered a Cisco-based campus network supporting pharmaceutical manufacturing equipment, scientific instrumentation, and end-user systems.
- Installed and validated sensitive laboratory instrumentation while coordinating with stakeholders, vendors, and external support teams.
- Standardized workstation deployment with custom Windows images and automated administration tasks using PowerShell, Power Automate, Active Directory, and Microsoft 365.
- Diagnosed network connectivity, shared-resource, remote-desktop, and hardware issues and supported remote-site and datacenter operations.
- Installed and configured firewalls and other network edge devices, including site-to-site and remote-access VPN connections.

CERTIFICATIONS

- CompTIA A+
- CompTIA Network+
- CompTIA Security+
- CompTIA Project+
- AWS Cloud Practitioner
- ITIL 4 Foundations

MILITARY SERVICE

US Army Airborne Infantry, Honorable Discharge 2014 - 2019

- Provided leadership, training, and guidance to teams of up to 25 personnel while maintaining clear communication across junior personnel and senior leadership.
- Coordinated with intelligence personnel, interpreters, and other teams to collect, evaluate, and communicate operational information in time-sensitive environments.
- Created and presented instructional materials and trained soldiers on the safe and effective operation of multiple complex equipment systems.
- Performed complex operations in austere environments under rapidly changing and high-consequence conditions.
